Kontraktbilag A2 – UCC Service Bridge import agreements

UCC Service Bridge import

System	Import from system to UCC Services Bridge	Import from UCC Services Bridge to Drupal Feed Importer	Drupal Solr indexes content	Content in Drupal	Import method	Agreements
SIS (SIS Courses and modules)	Every 3rd hour: 01.00, 04.00, 07.00, 10.00, 13.00, 16.00, 19.00, 22.00	Every 3rd hour	2-15 min after import	Course and certification SIS	SOAP	Courses and modules from SIS should be unpublished at start date + 14 days, but never later than end date. Courses/modules are usually removed from feed at start date, but Drupal makes sure not to unpublish it untill 14 days later. If a course is removed from feed before start date, we assume it's cancelled, and it should be unpublished in Drupal.
CUBE (CFU courses)	Four times a day: 10.05, 12.05, 14.05, 16.05	Four times a day: 10:15, 12:15, 14:15, 16:15	2-15 min after import	Course CUBE Course CUBE lesson	XML from FTP	Courses are unpublished at start date + 12 hours (the same for both one day courses and longer courses). If a course is cancelled, UCC webmaster deactivates/removes it manually on ucc.dk (under scheduling options).
UMS (Employees, from UCCs internal system (Medarbejder_UCC.xml))	(sent from UCC at 22.30) Once a day: 23.00	3 times during night: 00.00, 01.00. 02.00	2-15 min after import	Employee	XML from FTP	When an employee is no longer present in the xml file, the employee node should be unpublished in Drupal. Drupal Feed importer should make sure that import to the Bridge is done before importing to Drupal. The import from the Bridge to Drupal Feed Importer is split into several imports, because cron job can't handle all content in one job.
PURE (Data about employees, from ucviden.dk)	Once a day: 00.00	5 times during night: 02.15, 03.15, 04.15, 05.15, 06.15	2-15 min after import	Content PURE, Project PURE, Publication PURE (shown as tabs in Employee nodes: CV, Projects and Publications)	SOAP	PURE import should always be done when UMS imports are done. PURE import should only create Content/Project/Publication PURE node if the corresponding Employee node exists in Drupal. As a part of the PURE import we check existing Content/Project/Publication PURE nodes in Drupal. If the corresponding Employee node is deleted from the site, then the nodes should be unpublished. The import from the Bridge to Drupal Feed Importer is split into several imports, because cron job can't handle all content in one job.
PeopleXS (Job ads from external recruitment service)	Every hour	Every hour	2-15 min after import	Job ads	SOAP	Job ads should be unpublished in Drupal at End application date (ansøgningsfrist) at 23.45
NEWS (initial migration)	Not used anymore	-	-	-	-	-
